

New Direction

Winter weather presents multiple challenges for plant operations

With campus power outages, low water pressures, depletion of water, and leaks brought on by snow load, plant ops has been incredibly busy for the past week. They connected a water truck to a holding tank in the penthouse to help supply water to our toilets, sinks and showers while the water was out. They also had to bring in portable toilets. The good news is that water service has been restored and the boil water notice has been rescinded.

To meet the challenges brought on by snow, ice and extremely low temperatures, plant ops staff, like many other departments, stayed at the hospital 24/7 during the cold weather crisis. Now that the snow and ice has melted, they will be busy making all manner of necessary repairs.

Nancy Tello, hospitality assistant, took a break from her regular duties to make Valentine's Day candy bouquets recently.

During the recent bad weather, the dietary department fed staff who stayed over breakfast, lunch and even dinner, with the help of some generous donations from our community.

We're proud to see volunteers like Fred Niehaus back at the front desk!

Staff treated to cookies, chocolate and T-shirts for Valentine's Day

Our staff got lots of love and attention the Thursday and Friday just prior to Valentine's Day, enjoying long-sleeved hospital imprinted T-shirts and Hershey bars distributed by the senior management team and then heart-shaped sugar cookies donated by Post Acute Medical, Hospice of East Texas, Abri Health, Aero-Care, Right at Home, Allegiance and A Pineywoods Home Health. If you didn't get a T-shirt, stop by the human resources department to pick yours up.

Complimentary Sweet Baby Shades delivered for babies at Nacogdoches Memorial

The women's and children's center recently received a shipment of donated Sweet Baby Shades to pass along to any babies born at NMH. Billed as a social distancing tool for today's environment, the shade can be attached to a stroller or to a car window and promises to protect the child from unwanted human contact, as well as providing UV protection and cooler airflow. Some of the SFA student nurses were on hand to help with the delivery.
